Windbg for memory analysis using mimikatz ERROR

Posted by asad - 25 Jun 2015 - 08:28

I'm using windbg version 6.12 and using mimilib.dll for debugging memory. All works fine until I get following output on UI

0:000> !mimikatz

DPAPI Backup keys
==========

Current prefered key:

Compatibility prefered key:

SekurLSA
========
Acquire keys

note: the memory dmp is of lsass

Is this anything to do with symbol or respective dll /system32? Kindly suggest.
