Windbg for memory analysis using mimikatz ERROR Posted by asad - 25 Jun 2015 - 08:28

I'm using windbg version 6.12 and using mimilib.dll for debugging memory. All works fine until I get following output on UI
0:000> !mimikatz
DPAPI Backup keys
Current prefered key:
Compatibility prefered key:
SekurLSA ====== Acquire keys
note: the memory dmp is of Isass
Is this anything to do with symbol or respective dll /system32? Kindly suggest.
