

Windbg + Crash Dump

Posted by Gustavo Cruz - 12 Apr 2011 - 22:39

Hi,

I've lots of question about some informations i can extract from a complete crash dump. I will be glad if someone can help me.

I'm using windbg with crash dump.

I set

Symbol search path is:

srv*c:symbols*http://msdl.microsoft.com/download/symbols;C:WINDOWSsymbols

Executable search path is: C:SymbolsI386

Is it possible to extract information about the routing tables?

Is it possible to extract information about the ports? Which process was using that port.

Is it possible to extract information about the users logged on?

Someone know some book who i can read to extract this informations?

Best Regards.
