WinDbg !threads for ASP.NET 4 memory dump

Posted by sideout - 19 Oct 2012 - 19:20

!ASPXPages from psscor4 doesn't display threadID's for threads that are queued or completed. However !threads seems to show a threadID all the time. Does it include threads that are queued? idle in the thread pool? completed?

I'm finding it hard to reconcile the list of threads with what state it's in to know whether I should look into it further and understanding what exactly !threads shows would help.
